

NAME:- PASUMARTHI RUTWIK

Reg No :- 19BC5094

① QUERY:-

Select ZPerName from ZooEmpTable order by 3
asc;

Output:- "Error"

Reason:- Since only two ~~rows~~ ~~columns~~ columns are specified (~~ZooEmpTable~~ ZPerName and ZPerId) but query is asking for 3 columns. Therefore it displays error.

② Select * from employees where

Select emp1.name from employees

Select emp1.name from employees

emp1, employee emp2.

where emp1.policy = emp2.policy.

③ Select * from (

select product, revenue, sales-volume,
dense-rank()

over (order by sales-volume desc) r from Sales)

where r=8m;

④ True, SQL server drops all related objects, which exists inside a table like constraints, indexes, columns, defaults etc. But dropping a table will not drop views and stored procedures as they exist outside the table.

⑤ QUERY:-

Select * from Std-Info-Details

where Std-Id % 2 = 0;

Reason: Here Std-Id is of Int datatype and Std-Id modulus 2 ~~is zero~~ if remainder is zero then it will fetch the values of Std-Id which are even i.e alternate records

⑥ Create Table Uni-Table

As (select *

From UniversityTable WHERE 3=4);

Output:- Empty Table

Reasons:- we are creating a table called Uni-Table which take values from UniversityTable when it satisfies the given condition & but here 3 cannot be equal to 4 so no row values will be created inside Uni-Table. Hence it creates a empty table.
